ESTUARIES

Estuaries is the first comprehensive collection of scientific papers covering the comparatively new field of estuarine research. The volume contains seventy-one articles on physical and biological factors, geomorphology, sediments and sedimentation, microbiota, ecology, evolution, fisheries, human influences, and pollution. *Estuaries* is based on the 1964 Conference on Estuaries, Jekyll Island, Georgia; additional papers have been included to make it the definitive work on the subject. A supplementary bibliography lists the more recent contributions to this new field of study.

Edited by George H. Lauff and published in April 1967 by the American Association for the Advancement of Science, *Estuaries* consists of 776 pages, a supplementary bibliography of 437 entries, 1,639 literature citations, 525 illustrations, 85 tables, and an index of more than 14,000 entries. Cash orders by AAAS members \$24.00, regular price \$27.00.
